

Roll no : 220101
Name : Anjali S
Department CS
Semester : 5

Fill up :

1. a) byte code
   b) Break
2. a) b) len
   b) c) List
3. Define a function (b)
   key - value pair (c)
   Immutable (d)
   Open a file (a)
   Skip current iteration (e)
4. PART - B

4) Python :

Python is high - level programming lan
interpreted, object oriented, general purp

Programming language

Features :

High-level

Object-oriented

Easy-to learn

---

5) List and tuple

List	Tuple
* it is mutable	* Tuple is unmutable
* Square bracket [] in list	* parantheses ( ) are use in tubles
* More method available	Fewer method availab

7) break & continue :

break :

- Terminates the loop immediately
- Control comes out of loop

Continue

* Skip the current iteration
* Control move to the next iteration

8) Function :

A function is block of code that perform specific task

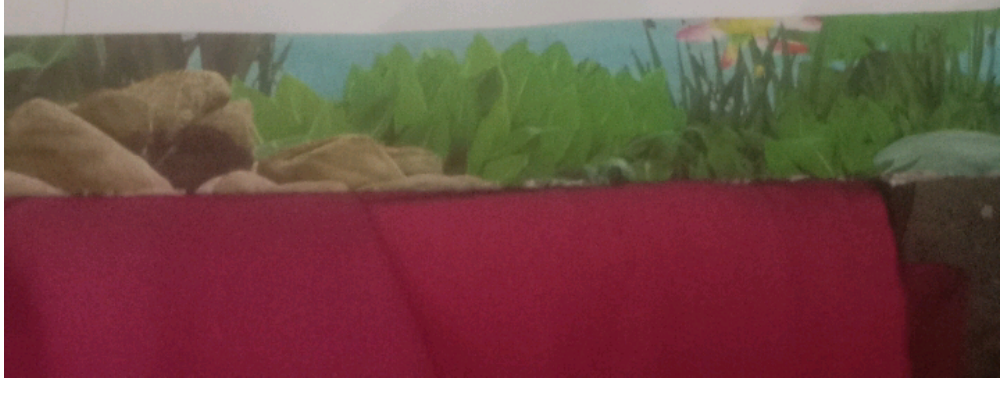

- it improves code reusability
- keyword : def , function name

Syntax :

```
def function_name (parameters):
    Statement
    return value
```

9) Python program :

```
a = int (input ("Enter the first number"))
b = int (input ("Enter the second number"))
if a > b :
    print ("Largest num is :", a)
elif a < b
    print ("Largest num is :", b)
else :
    print ("Both are equal")
```

Part - C

11) a) Function and types of arguments

* Function:

Function is a named part of program with smaller size which is used to perform specific task

Syntax:

```
def function_name():
    statement
    return value
```

* Required argument

```
def add(a,b):
    return a+b
print(add(4,5))
```

* Default argument

```
def greet(name="guest"):
    print("hello",name)
greet("Ravi")
greet()
```

* key word argument

```
def details(name, age):
    print(name, 'age', age)
details(age=20, name="Ravi")
```
